**Betreff:** SV: Data from "Evaluating replicability of laboratory experiments in economics"

---

Hi,

Sorry, but I have no idea about this! I didn't know there was a license for the SSRP data, but no license for the EERP data (and I have never heard of "a CC0 1.0 license").

But for me it is fine to include any data that we have posted for the SSRP and EERP projects. Good luck with the R-package!

Best wishes

Magnus

Hi Samuel and Leonhard,

Thanks for this and sounds like a super interesting project. I think Magnus knows more here (he knows everything!), but personally I didn't think about licensing issues until pretty recently, and including the data in your package sounds good to me.

See you in a few weeks Leonhard! (And hopefully you too Samuel!)

Anna :)

am cc'ing Anna & Magnus who may know more about this. I think in principle we will release data  
but licensing may not have caught up from a few yrs ago to now

**Subject:** Data from "Evaluating replicability of laboratory experiments in economics"

Dear Dr. Camerer,

I very much enjoyed reading your papers "Evaluating replicability of laboratory experiments in economics" and "Evaluating the replicability of social science experiments in Nature and Science between 2010 and 2015". For my master thesis I used the data from both projects (downloaded from <https://osf.io/pnwuz/> and <https://osf.io/abu7k>). The thesis has now turned into a paper "Probabilistic forecasting of replication studies", a preprint is available at <https://psyarxiv.com/fhwb7>, if you are interested.

I'm currently developing an R-package together with my supervisor Leonhard Held which includes functionality for the design and analysis of replication studies. Your data would fit perfectly as example data sets! I saw that the data from the social sciences project was released under a CC0 1.0 license, however, there is no such license for the data from the economics project. Would it be possible to include also the economics data set in our R-package (of course with proper citations)? I look forward to your reply.

Best regards,  
Samuel Pawel
